DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 44-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chittipeddi, of record, the explanation of which is hereby incorporated by reference from the previous action, in view of Applicant's admitted prior art shown in FIG. 14. Applicant has argued that the reference to Chittipeddi does not teach connecting a plurality of electrostatic protection elements between an input pad and the circuit. However, giving the claim language its broadest interpretation, each single FET which makes up part of an ESD protection component can be considered an individual element. That is, the prior art structure shown in FIG. 14 can be considered to contain two separate elements, namely the p channel FET and the n channel FET.

Furthermore, Chittipeddi does describe his device as including a plurality of ESD components which are associated with the circuits shown in FIG. 1a. See, for example, his discussion at col. 3, l. 35-45. As such, it appears that Chittipeddi forms plural electrostatic protection elements associated with each circuit, and that selective ones of these plural ESD protection elements can be disabled by means of plural fuses so as to tailor the overall circuit characteristics of the internal circuit.

Certainly, one skilled in the art would recognize that capacitance would be one of the circuit characteristics that could be adjusted, and, indeed, Chittipeddi's whole thrust is to improve the circuit operation by eliminating unwanted components such as certain ESD protection elements which are no longer needed.

Given that Chittipeddi provides ESD protection elements for each circuit sector, and then seeks to disable unnecessary ESD elements, applicant's specific claim recitations concerning the number of fuses formed and subsequently disconnected, would be within the scope of this reference's teaching.

In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
